

Graduation Project Proposal Form

1. Project Information

- Project Title: Oracle Order Management Implementation for Food Industry
- Course/Track: Oracle Digital Supply Chain
- Team Members:
 - Salma Yosry
 - o Nermeen Fawzy
 - Lojain Ali
 - o Roza Ramy
 - Menna Ahmed
 - Ahmed Ashraf

2. Project Overview

• Objective:

The objective of this project is to implement Oracle Order Management in the food industry to improve the efficiency of order processing, streamline inventory management, and ensure faster, more accurate deliveries.

• Scope of Work:

- o Analyze the current challenges in order management within the food industry.
- o Configure Oracle Order Management to automate order processing.
- o Integrate the solution with inventory and delivery systems.
- o Conduct testing to ensure smooth operation and user adoption.
- o Provide training materials and user documentation.

• Expected Outcomes:

A fully implemented Oracle Order Management system designed specifically for the food industry. The solution will enhance operational efficiency by automating order processing, improving inventory accuracy, and optimizing delivery times.

3. Problem Statement

The food industry faces operational inefficiencies due to the lack of integration between order processing, inventory management, and delivery. These inefficiencies can lead to delayed deliveries, inventory inaccuracies, and high transaction volumes that are difficult to manage with current systems. This project aims to implement Oracle Order Management to address these issues, improving overall business operations.

4. Proposed Solution

The project proposes to deploy Oracle Order Management to streamline the order-to-cash process, ensuring real-time inventory visibility, automating order fulfillment, and optimizing delivery schedules. The solution will be tailored specifically to the needs of the food industry, integrating with supply chain and logistics systems for seamless operations.

5. Resources Needed

- Hardware/Software:
 - o Oracle E-Business Suite
 - o Oracle Order Management Module
 - o Server and database setup for the Oracle EBS environment
 - o Integration tools for connecting the Order Management system with other modules and third-party applications

6. Approval
